# AIRFLAPS BY SHOT

Simple, light and compatible with almost any helmet. Airflaps is a patented device allowing to hold the goggles slightly indented from the face. The air-flow generated behind the lens and under the helmet offer a real advantage for safety and comfort.

- Airflaps stop and delay the formation of fog during intense efforts
- Speeds up the disappearance of the fog
- Reduces the temperature under the helmet
- Eases the face from the goggles pressure
- Dries the perspiration in the goggles foams

Airflaps also allow riders to wear and to take off the helmet without removing the mask. Done with badly adjusted straps, goggles that will dangle on the wrist or that gets muddy while dangling the handlebars.

airflaps in **PIVOT POSITION**  
front > back

airflaps in **OPEN POSITION**  
goggles indented from the face

## OPERATION AND INSTALLATION

Airflaps consist of two elements positioned on both sides of the helmet. Installing Airflaps takes only a few seconds. It is fixed in place by double face adhesive of 3M similar to that used for GoPro. It requires no transformation to alter the properties of the helmet.

Thanks to the system of pre-settings by screws, the riders can adjust the space between the goggles and their face. By removing completely the screw, we separate the shutters from the base of the fixture. These then serve as a guide for the strap of the mask.
